TIME AND COST SAVING PACKAGED MECHANICAL SYSTEMS

Daikin custom, factory-built **PACKAGED MECHANICAL SYSTEMS** provide application flexibility that saves you time and money by streamlining the design, construction and installation process. This is your total HVAC system solution. The enclosed systems can be located on the rooftop or exterior of the building to save valuable interior space, while skidded systems can be installed into equipment rooms minimizing on-site labor.

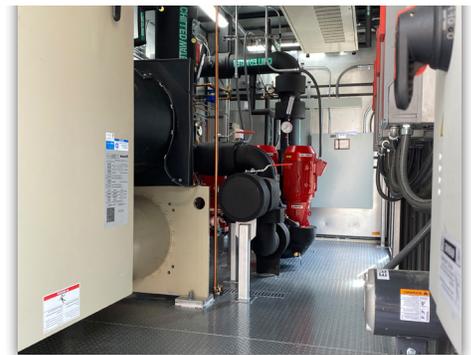

From start to finish, Daikin's skilled design team uses state-of-the-art design tools to tailor a mechanical system to your specific needs. Each system is designed to have a compact footprint without sacrificing access for operation, maintenance or service.

This custom system solution supports a wide range of applications, from classrooms and casinos to data centers and grow facilities.

TYPICAL PACKAGED APPLICATIONS ENCLOSED OR SKIDDED

- Cooling Packages
 - Small cooling plants with water-cooled chillers, pumps, cooling towers and controls
- Heating Packages
 - Small heating plants with boilers, pumps and controls
 - Small heating plants supporting water source heat pump applications with boilers, pumps, cooling towers and controls
- Cooling and Heating Packages
 - Small central plants with water-cooled chillers, boilers, pumps, cooling towers and controls
 - Small central plants supporting air-cooled chiller applications with boilers, pumps and controls
- Hydronic Pumping Packages
 - Pump packages supporting air-cooled chiller applications
 - Pump packages for remote secondary pumps in chilled water applications

By purchasing a Daikin custom-engineered system in a single, complete package, you can reduce your project's timeline, minimize coordination efforts, streamline installation and improve quality.
